

Dr. Gabriel Granco is a geographer from Brazil and he is an Assistant Professor of Geography in the Department of Geography and Anthropology at the California State Polytechnic University Pomona. Dr. Granco is a human-environment interaction geographer with research interests on water sustainability, agricultural land use, and decision-making processes for sustainability. The methods of analysis include agent-based models, spatially explicit models of land use, and econometric models. Before his position at CPP, Dr. Granco was a postdoctoral researcher at Kansas State University and the Stroud Water Research Center. Dr. Granco has a Masters in Applied Economics from ESALQ/USP, and a Ph.D. in Geography from Kansas State University.

Dr. Mario Mighty is geographer from Jamaica with a strong interest in agriculture, geographic information systems (GIS), economic development and the impacts of globalization on small island developing states. He currently serves as Assistant Professor at the University of North Alabama. He is a graduate of the University of Florida where he obtained both his Masters and PhD in Geography. Throughout his academic career he has explored how various export crops, notably citrus, bananas and coffee compete on the global agricultural markets. An active member of the southeastern and national divisions of the Association of American Geographers, his primary research foci are GIS applications in agriculture and economic development in small islands. Other interests include competition in international agribusiness and implementing sustainability approaches in economies.
